

Smart Line Technology facility offers a wide range of production capabilities for both complex and high-volume products, providing a complete solution for your manufacturing and logistics needs in Europe.

We deliver a full range of New Product Introduction (NPI), assembly and test services to companies in the Communications and Networking, Computing and Storage, Automotive, Industrial, Consumer and High-end Audio sectors. Furthermore, we provide comprehensive services for supply chain development, component engineering and process development - at the same time managing all aspects of product engineering support during manufacturing, including cost-reduction, redesign when components become obsolete, sustaining engineering and documentation management.

Years of manufacturing experience and our strong competencies enable us to deliver stable and cost effective solutions to our customers.

Our facility is strategically located within 30 minutes of major shipping hubs in Serbia - Vojvodina, making a convenient and effortless gateway to other countries.

- Fully automated production line
- 0201, uBGA, PBGA, CCGA, QFP, 0,4mm pitch ICs.
- SPI, AOI, VIWEB, CompLoss
- Siplace ASM P&P - 50.000 cp/h
- Inline / offline - MCU / memory programming
- TH production line
- Halogen free, Lead Free or Lead soldering
- Soldering according to IPC610
- Repair and rework according to IPC 7711/7721
- Module / Final / System Assembly
- NPI - Prototyping - System Integration
- High Volume / Low Mix, Low Volume / High Mix
- Regional / International Shipping
- Warranty / Non - Warranty / Repair / Rework Support
- Functional and System Tests
